## LISTING OF CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

- Bourd Dening (Original) An apparatus for use in a well having a main bore and a lateral branch, the
  - lateral branch comprising an electrical device, the apparatus comprising:
  - an inductive coupler mechanism to electrically communicate electrical signaling in the 3
  - main bore with the electrical device in the lateral branch. 4
  - (Previously Presented) Apparatus to communicate electrical signaling from a main bore 2. 1 of a well to equipment in a lateral branch, comprising: 2
  - a connector mechanism adapted to connect equipment in the main bore to equipment in 3 the lateral branch; and 4
  - a first inductive coupler partion attached to the connector mechanism to communicate 5 electrical signaling with the lateral branch equipment. 6
  - (Previously Presented) The apparatus of claim 2, further comprising an electrical cable 1 3. connected to the first inductive coupler portion. 2
  - (Original) The apparatus of claim 3, further comprising a second inductive coupler 1 4.
  - portion connected to the electrical cable and attached to the connector mechanism, the second 2
  - inductive coupler portion adapted to communicate signaling with the main bore equipment. 3
  - (Original) The apparatus of claim 4, further comprising a third inductive coupler portion 1 5.
  - that is part of the main bore equipment to inductively couple to the second inductive coupler 2
  - 3 portion.
  - (Original) The apparatus of claim 5, further comprising a fourth inductive coupler 1 6.
  - portion that is part of the lateral branch equipment to inductively couple to the first inductive 2
  - 3 coupler portion.

- 1 7. (Original) The apparatus of claim 2, wherein the connector mechanism is further adapted
- 2 to connect equipment in the main bore to equipment in a second lateral branch, the apparatus
- 3 further comprising a second inductive coupler portion attached to the connector mechanism to
- 4 communicate electrical signaling with the second lateral branch equipment.
- 1 8. (Original) A completion string for use in a well having a main bore and a lateral branch,
- 2 comprising:
- 3 equipment in the main bore and in the lateral branch;
- a first inductive coupler assembly proximal the equipment in the main bore;
- a second inductive couplex assembly proximal the equipment in the lateral branch;
- 6 and
- 7 an electrical cable connecting the first and second inductive coupler assemblies.
- 1 9. (Original) The completion string of claim 8, further comprising equipment in a second
- 2 lateral branch, the completion string further comprising a third inductive coupler assembly
- 3 proximal the equipment in the lateral branch.
- 1 10. (Original) The completion string of claim 9, further comprising a fourth inductive
- 2 coupler assembly proximal the main bore equipment and a second electrical cable connecting the
- 3 third and fourth inductive coupler assemblies.
- 1 11. (Original) The completion string of claim 8, wherein the equipment in the main bore
- 2 includes a tubing, the completion string further comprising a connector member between the
- 3 tubing and the lateral branch equipment.
- 1 12. (Original) The completion string of claim 11, wherein the lateral branch equipment
- 2 comprises an electrical device.
- 1 13. (Original) The completion string of claim 12, wherein the electrical device comprises a
- 2 monitoring module.

- 1 1 (Original) The completion string of claim 12, wherein the electrical device comprises a
- 2 control module.
- 1 15. (Original) The completion string of claim 11, further comprising a casing having a
- 2 window open to the lateral branch, wherein the connector member extends through the casing
- 3 window.
- 1 16. (Original) The completion string of claim 11 wherein the first inductive coupler
- 2 assembly comprises one portion attached to the tubing and another portion attached to the
- 3 connector member.
- 1 17. (Original) The completion string of claim 16, wherein the second inductive coupler
- 2 assembly comprises one portion attached to the connector member and another portion attached
- 3 to the lateral branch equipment.
- 1 18. (Original) The completion string of claim 8, further comprising a hydraulic control line
- 2 adapted to extend from the main bore to the lateral branch.
- 1 19. (Original) The completion string of claim 18, further comprising a lateral branch
- 2 connector adapted to connect the main bore equipment to lateral branch equipment, the lateral
- 3 branch connector comprising a conduit to carry the cable and a conduit to carry the hydraulic
- 4 control line.
- 1 20. (Original) A method of communicating between main bore equipment and lateral branch
- 2 equipment in a well, comprising:
- providing a first inductive coupler assembly electrically connected to the main ore
- 4 equipment and in communication with the lateral branch equipment; and
- 5 transmitting electrical signaling over an electrical cable connected to the first inductive
- 6 coupler assembly.

3

1	21. (Original) The method of claim 20, further comprising:
2	providing a second inductive coupler assembly electrically connected to the lateral
3	br <del>anch-equipment; an</del> d
4	electrically connecting the second inductive coupler assembly to the first inductive
5	coupler_assembly.
1	22. (Currently Amended) The apparatus of claim 2, further comprising Apparatus to
2	communicate electrical signaling from a main bore of a well to equipment in a lateral branch,
3	comprising:
4	a connector mechanism adapted to connect equipment in the main bore to equipment in
5	the lateral branch;
6	a first inductive coupler portion attached to the connector mechanism to communicate
7	electrical signaling with the lateral branch equipment; and
8	a tubing having a lower portion, the lower portion of the tubing having a second inductive
9	coupler portion,
10	wherein the connector mechanism has a third inductive coupler portion and a receptacle
11	to receive the lower portion of the tubing to position the second inductive coupler portion next t
12	the third inductive coupler portion.
1	23. (Previously Presented) The apparatus of claim 22, further comprising a module to
2	engage an internal profile of the connector mechanism, the module having a fourth inductive
3	coupler portion that is positioned next to the first inductive coupler portion when the module is
4	engaged to the internal profile of the connector mechanism.
1	24. (Previously Presented) The apparatus of claim 23, wherein the module comprises one o
2	a sensor module and a control module.
1	25 (Drawiewsky Dragontod). The mothed of eleim 21 further commissions:
1	25. (Previously Presented) The method of claim 21, further comprising:
2	providing a connect to connect the main bore equipment to the lateral branch

equipment, wherein the connector has a receptacle to receive the main bore equipment, the

-connector-having-a-portion-of-the-first-inductive-coupler-assembly.

1	26. (Currently Amended) The method of claim-25, A method of communicating between
2	main bore equipment and lateral branch equipment in a well, comprising:
3	providing a first inductive coupler assembly electrically connected to the main bore
4	equipment and in communication with the lateral branch equipment;
5	transmitting electrical signaling over an electrical cable connected to the first inductive
6	coupler assembly;
7	providing a second inductive coupler assembly electrically connected to the lateral
8	branch equipment;
9	electrically connecting the second inductive coupler assembly to the first inductive
10	coupler assembly; and
11	providing a connector to connect the main bore equipment to the lateral branch
12	equipment, wherein the connector has a receptacle to receive the main bore equipment, the
13	connector having a portion of the first inductive coupler assembly,
14	wherein the main bore equipment includes a tubing having a lower portion to engage in
15	the receptacle of the connector, the lower portion of the tubing having another portion of the first
16	inductive coupler assembly.
	•
1	27. (Previously Presented) The method of claim 26, further comprising providing a module
2	into the connector, the module having a portion of the second inductive coupler assembly, and
3	the connector having another portion of the second inductive coupler assembly.
